WORK EXPERIENCE

Ecolab Digital

Bangalore, India

Feb-2025-present

- Led the migration of legacy Java Spring MVC components to Spring Boot, adopting modern architecture patterns to improve performance, scalability, and maintainability.
- Collaborated with cross-functional teams to ensure smooth integration of new features with existing modules, conducting end-to-end debugging and testing to maintain system stability and performance.
- Contributed to the gradual decomposition of a monolithic application by developing and integrating Spring Boot microservices for new business capabilities, enabling better scalability and independent deployments.
- Leveraged GitHub Copilot to accelerate development tasks, generate boilerplate code, and improve productivity while validating AI-generated code against project standards.
- Optimized SQL Server stored procedures by refining joins, indexes, and query logic, reducing execution time and improving application response times for critical workflows.
- Investigated production incidents using Azure App Service logs, Application Insights, and Log Stream to identify root causes, troubleshoot failures, and minimize downtime.
- Enhanced Azure DevOps CI/CD pipelines by adding and maintaining build validation, unit test execution, code quality checks, and deployment steps to improve release reliability.
- Participated in code reviews, ensuring adherence to coding standards, maintainability, and best practices across the development team.
- Worked closely with QA and product teams to resolve defects, validate releases, and ensure successful production deployments.
- Performed root cause analysis for production issues and implemented permanent fixes to prevent recurrence and improve system reliability.

- Successfully led the migration of an MVC application to a new subscription from another vendor to our environment, ensuring seamless integration with SQL Server and thorough testing to identify and resolve existing bugs. The application is hosted on **Azure App Service**. url: visit.cummins.com/
- Replaced **Twilio** with an internally developed API for messaging, utilizing bearer tokens via **REST API** for enhanced security. This implementation required client ID and password for token generation, and the tokens were subsequently used to call another API. The process was efficiently managed using RestSharp in .NET.
- Designed and deployed database tables to store video URLs on **Azure Blob Storage**, leveraging Azure Blob for video streaming capabilities, thereby enhancing the application's multimedia handling.
- Integrated Application Insights into the application to monitor performance and diagnose issues, contributing to improved reliability and user experience.
- Implemented services using **Entity Framework and Dependency Injection**, promoting maintainable and scalable code architecture.

- Played a key role in coding **microservices** that significantly enhanced the efficiency and reliability of operations for an insurance company(Humana). These microservices were instrumental in checking the compliance of its agents.
- Spearheaded the development of REST APIs using ASP.NET Core, with a primary focus on storing and retrieving agent data while implementing critical business logic. The optimization efforts implemented during this process have resulted in notable improvements, specifically achieving faster query times for business-users.
- Contributed to the development and maintenance of **microservices architecture** within the insurance company, enabling scalable and modular application design.
- Applied **Agile methodology** principles to the development process, collaborating closely with cross-functional teams, including product owners, business analysts, and quality assurance engineers.
- Utilized **Scrum framework** to facilitate iterative and incremental development, ensuring flexibility, adaptability, and frequent delivery of high-quality software.
- Implemented **continuous integration and deployment (CI/CD)** practices using Azure DevOps and hosted servers on Azure, ensuring streamlined development and deployment processes.
- Analyzed existing **React** components to ensure compatibility with both older and newer versions of React.
- Ensured critical application functionality remained intact by implementing and running unit tests.
- Developed a web job on azure to seamlessly extract and process an extensive volume of data from **GCP BigQuery**, facilitating the efficient migration of millions of records to a SQL Server database.
- Designed and implemented a robust data pipeline that not only efficiently transferred data but also ensured data security and compliance, with a focus on privacy.
- Engineered a novel process where a newly created SQL Server table was automatically populated with extracted data, enabling further analysis and manipulation while maintaining data integrity.
- Implemented a highly optimized stored procedure that dynamically masked sensitive identifiers within the newly created table, ensuring data privacy and compliance with stringent regulatory requirements.

EDUCATION

University	Degree		Year	CGPA
Sharda University	BCA-MCA		2016-2021	8.0

TECHNICAL SKILLS

- Languages: C#, JavaScript, Typescript
- Java
- Frameworks: dotnet Core, Angular, react
- Cloud Technologies: Azure
- Databases: MySQL, Microsoft Sql Server, azure db
- Modern Tools: azure devops, git, AI

SKILLS

- Strong understanding of **object-oriented programming principles**.
- Knowledge of **database management systems, database design**.
- Familiarity with software development methodologies (Agile, Scrum, etc.).
- Excellent **problem-solving** and debugging skills.
- Strong teamwork and communication abilities.

CERTIFICATIONS

- AZ-900: Microsoft Azure Fundamentals
- Az-204: Developing Solutions for Microsoft Azure

PROJECTS

- **Rotten Potato (Angular)**

Description: Developed an Angular movie review site that offers users popular movie recommendations and detailed information using the IMDb API. The application includes login and logout functionality, dependency injection (DI), routing, and a responsive UI designed with CSS.

Roles/Responsibilities:

- Implemented secure login and logout features for user authentication.
- Integrated the IMDb API to fetch and display real-time movie data, including ratings and reviews.
- Designed a visually appealing and responsive user interface using CSS.
- Utilized Angular routing to enable seamless navigation between pages.
- Incorporated DI to enhance modularity and maintainability of the codebase.
- Technologies: Angular, IMDb API, CSS,

TypeScript. Github: [varunification/Moviesapp](https://github.com/varunification/Moviesapp)

Date: 3/08/26

Place: New

Delhi
